

MEMORY FOAM

Constantly looking for solutions to improve the customer experience in terms of comfort and relaxation, since 2015 LEMI has been using the MEMORY foam for its massage tables. What does MEMORY mean? Imagine a bed that “remembers” you, adapting to your unique characteristics .. this is what distinguishes the MEMORY from the other mattresses, as it is made with a thick foam based on polyurethane, viscoelastic material that reacts to weight and heat of the body. That’s why MEMORY mattress, thanks to its thermal sensitivity, a thickness of 15 cm and its 3 layers of foam of different density, is “self-modeling” adapting to the body shape of each individual through the heat of the body, offering instantaneous support to the back and joints, ensuring a total comfort experience, as only the parts in touch with the body will get softer while the others will preserve their own texture. The form is thus “memorized”.

Considering the duration of a treatment or massage (which can vary from 45 to 60 minutes) the MEMORY turns out to be the most suitable type of mattress. In fact, LEMI uses it for its mattresses with a 74 and 82 cm width, also for different kinds of people featuring a higher or larger size, thus allowing them to comfortably lie down in a supine position, enjoying the experience with no stress and tension, thanks to the added luxury of MEMORY foam.
